PRODUCTION

Contract manufacturing

The implemented system for tracking the production process ensures full control of all steps involved in the production of the device.

We provide

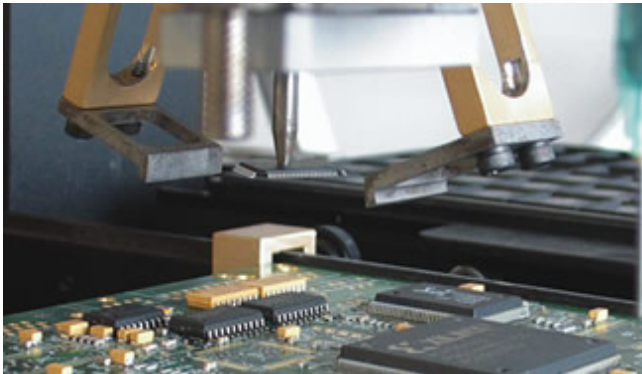

- ≡ Designing PCB (Protel, Eagle, PADS).
- ≡ Preparation of technical documentation installation.
- ≡ Buying components and running the store.
- ≡ Installation of electronic components (surface, through-hole, mixed).
- ≡ Testing and commissioning of its components.
- ≡ Final assembly of complete units.
- ≡ Picking and packing of finished products.
- ≡ Delivery to the final customer.
- ≡ Warranty service.

Technologies

- ≡ SMD single and double sided.
- ≡ Mounting through-hole soldered by hand.
- ≡ Editing mixed - through hole and SMD.
- ≡ Installation of lead and lead-free.

Additional offer

- ≡ Washing electronic circuits.
- ≡ Coating and conformal coating.
- ≡ Electrical tests and functional.
- ≡ Inspection switcher installed packages.
- ≡ Reports from the manufacturing process.

Offer production

ENTE Ltd. specializes in the design and manufacture of advanced electronic equipment and systems are created according to the customer. One of the main areas of activity, in addition to its own production of electronic equipment and systems, the electronic circuit assembly service on behalf of the outsourcing.

ENTE company has a modern assembly line electronic circuits in SMD technology. Machine park consists of high-end performance machines, such as Flexible Value-Based In-Line Printer EKRA X4, pick & place machine JUKI KE-2060RL and ERSA soldering furnace HOTFLOW 2/14. They are designated as medium-volume production of complex circuits with large-scale integration and low pitches pins. For regular customers, we also provide short series of prototypes at discounted prices.

In the Ente offer is also manual THT (through hole). The company has several stations equipped with high-end companies Weller soldering equipment, ERSA and PACE and equipment for the inspection of MANTIS.
